This course provides an understanding of the methods of epidemiological study designs and their analyses, including issues of bias, confounding, and effect modification. The goal of this class is to provide a strong background in analytic reasoning and research design, study execution, analysis, and result interpretation.

This course is an introduction to epidemiology for students majoring in any aspect of the health sciences. This course presents the principles and methods of the epidemiological investigation of both infectious and non-infectious diseases. The purpose of this course is to equip students with the necessary knowledge and skills to explain the place of epidemiology in the general health thinking and to communicate and apply the basic principles of epidemiology.

This course is an overview of the epidemiology of chronic diseases and disabilities prevalent in various populations; it includes the introduction of contemporary methods for surveillance, including risk factors, etiology, and changes over time.

This course introduces the concepts and methods of spatial epidemiology. Students will gain hands-on experience in Geographic Information Systems (GIS) and spatial data analyses. Recent developments in location intelligence applied to healthcare and public health research will also be introduced.
**PHC 6598: Foundations in Precision Medicine: Genetic Epidemiology**

Format: Online  
Instructor: Alexander Parker, PhD  
Credits: 1  
Grading Scheme: Letter  
Prerequisites: None.

Genetic epidemiology, a rapidly evolving field of research, utilizes specialized molecular and statistical methods to identify genetic factors that might be involved in disease etiology. This course provides an exposure to fundamental concepts, terminologies and principles in human population genetics and molecular biology relevant to understanding genetic epidemiologic approaches.

**PHC 6937: Introduction to Mixed Methods Research**

Format: In Residence  
Instructor: Deepthi Varma, PhD, MPhil, MSW  
Credits: 3  
Grading Scheme: Letter  
HPNP G-110  
Prerequisites: PHC 6001 Principles of Epidemiology in Public Health and PHC 6000 Epidemiology Methods I (or equivalent research methods coursework). Students with no prior instruction in epidemiology but with methodological coursework from another related discipline may be admitted with permission from the instructor.

This 3-credit, on-campus course will introduce mixed methods research concepts to master’s and doctoral level students. This course focuses on the design and implementation of research that combines qualitative and quantitative data collection, and will discuss the purpose of “mixing methods” and ways to integrate qualitative and quantitative data.

**PHC 7000: Epi Seminar II: Critical Evaluation, Research Proposals, and Methods**

Format: In Residence  
Instructor: Krishna Vaddiparti, PhD, MPE, MSW  
Credits: 2  
Grading Scheme: Letter  
HPNP G-108  
Prerequisites: PHC 6001 and PHC 6000, one semester of biostatistics, and PhD student status in epidemiology, or permission from the instructor.

This course is taken in the second year of the epidemiology PhD program curriculum. The seminar series is designed to introduce students to a range of advanced epidemiologic concepts and research methods to help PhD students advance their dissertation ideas and obtain the skills needed for a PhD in epidemiology.

**PHC 7007: Cancer Epidemiology**

Format: In Residence  
Instructor: Volker Mai, PhD, MPH  
Credits: 3  
Grading Scheme: Letter  
HPNP G-110  
Prerequisites: PHC 6001 and PHC 6050 or PHC 6052, or permission from the instructor.

This course is designed to help students develop the interdisciplinary skills required for evaluating various existing and hypothetical public health interventions aimed at reducing the burden of cancer in the US and worldwide. The course will familiarize students with various exposures associated with the risk of developing cancer with emphasis on a population perspective. While a focus will be on opportunities for prevention; we will explore cellular mechanisms contributing to the development of various cancers and describe associated pathologies. Cancer epidemiology is taught in a combined lecture and discussion format.
PHC 7017: Advanced Epidemiologic Methods III  
Instructor: Xinguang (Jim) Chen, MD, PhD, FACE  
Credits: 3  
Grading Scheme: Letter  
Fridays, 9:35a-12:35p  
HPNP G-110  
Prerequisites: GMS 6800 and GMS 6810, or permission from the instructor.  
This advanced course will focus on the application of six advanced analytical and modeling methods through lectures, actual data analysis, student presentation and discussion to expand the methodology inventory by introducing advanced and new statistical and modeling methods to address measurement, descriptive, comparative, associative and causal relations in modern epidemiology.

PHC 7038: Psychiatric Epidemiology  
Format: In Residence; Online (CPE Only)  
Instructor: Catherine W. Striley, PhD, MSW, ACSW, MPE  
Credits: 3  
Grading Scheme: Letter  
Thursdays, 1:55p-4:55p  
COM C2-33  
Prerequisites: PHC 6000 and PHC 6011, or permission from the instructor.  
This advanced epidemiology methods course in Psychiatric Epidemiology will cover concepts, history, measures, methods and analytic techniques to study the risks, prevalence and incidence, course, comorbidities and consequences of major mental disorders (mood and anxiety disorders, schizophrenia, personality disorders, alcohol and drug abuse and dependence). Psychiatric epidemiology studies in general and specific populations internationally will be discussed for their methods, measures and findings.

PHC 7065: Critical Skills in Data Manipulation for Population Science  
Format: In Residence; Online (CPE Only)  
Instructor: Hui Hu, PhD  
Credits: 2  
Grading Scheme: Letter  
Mondays, 12:50p-2:45p  
HPNP G-112  
Prerequisites: PHC 6052 and PHC 6000 or the equivalent and PhD student status, or permission from the instructor.  
This course focuses on providing basic knowledge and skills needed in data manipulation for population science. Included will be: data context and concepts; relational databases; data collection and extraction; Parallel manipulation of massive datasets; NoSQL systems and concepts. The course is designed for advanced students to learn the “code of best practice” for data engineering in population science.

PHC 7199: Topics in Precision Medicine and Public Health Informatics  
Format: In Residence  
Instructor: Mattia Prosperi, MEng, PhD  
Credits: 1  
Grading Scheme: Letter  
Every other Tuesday, 10:40a-12:35p  
HPNP G-109  
Prerequisites: PHC 6000, PHC 6011, and a SAS course, or equivalent graduate statistical and quantitative research courses in any relevant department, or permission from the instructor.  
This course covers topics in precision medicine and public health informatics. The course was inspired by the White House 2015 initiative in precision medicine which stated that its mission is “to enable a new era of medicine through research, technology, and policies that empower patients, researchers, and providers to work together toward development of individualized care.” Students will learn how the initiative is being concretized since its inception, by studying real-world examples, and deepening on both the methodological and translational aspects.
PHC 7902: Scientific Writing for Peer Reviewed Publications for Population Science

Format: In Residence  
Instructor: Linda B. Cottler, PhD, MPH, FACE  
Credits: 1  
Grading Scheme: Letter  
Mondays, 5:15p-6:45p  
CTRB 3161/3162

Prerequisites: Graduate student status, or permission from the instructor.

This course will prepare students to perform peer review and to think critically. In weekly class discussion sessions, students will review each other’s work and bring work to edit and share. Feedback will be given by student peers and the course instructor. The principal goals of this Epidemiology Writing Circle are to: 1) improve the student’s academic writing style, 2) write, complete, and submit papers – with at least one as a first author, and 3) edit colleague’s manuscripts, regardless of topic area.
